Battle of neighborhood

problem statement

Everybody knows that kids are really important to their parents. When a family travel to a city they would think which locations would be nice and attractive to their kids. Any children museum, zoo or play area and parks are the locations which will be chosen by parents.

People prefer to choose neighborhood with accessibility to restaurants and shopping center too that is close to their kids attractions.

In this project I will analyse neighborhood in Toronto city to answer some following questions:

1: which neighborhood has more attraction for children?

2: if someone wants to open a play area which neighborhood would be the best?

3: which neighborhoods has attractions for both children and grown ups?

Data:

The data will be choosing from wikipedia and Forsquare API.
